📁 PROFESSIONAL EXPERIENCE

Software Engineer at AMAN Holding

May 2026 – Present

Key Responsibilities:

- Develop and maintain secure backend services for fintech and digital payment solutions using Java and Spring Boot.
 - Build scalable RESTful APIs for payment, wallet, merchant, customer, and transaction-based services.
 - Implement financial business logic including transaction processing, fees, settlements, and payment status tracking.
 - Ensure data consistency, reliability, and proper error handling across payment and financial workflows.
 - Troubleshoot and optimize production issues related to transactions, integrations, and backend performance.
-

Software Engineer at EJADA

Nov 2023 – Apr 2026

Key Responsibilities:

- Designed, developed robust and scalable backend applications using Java and Spring Boot framework.
 - Understand / implement RESTful APIs and using JSON format.
 - Developed and deployed micro-services to relevant environments using available CI/CD automation tools and use Docker for containerization.
 - Wrote and executed unit and integration tests and supports testing of deliverables against user and technical story acceptance tests and working collaboratively in Agile team.
 - Coordinated with relevant stakeholders inside and outside the squad to clarify commercial requirements and ensure the correct high-quality outcome and contribute to all stages of SDLC.
-

🎓 EDUCATION

Major Software Engineering , GPA 3.0

Sep 2019 – Jun 2023

Faculty of Computer and Artificial Intelligence, Cairo University

Graduation Project (Grade A+):

- Ride Sharing Mobile app using Flutter as a framework, Firebase for storing the data and Google maps for determining Source and Destination location.

- Proficiency in Unix / Linux operating systems (CentOS, RedHat).
- Strong experience with Spring Boot framework and Spring cloud / Spring security.
- Hands on experience in cloud based infra-structure (Docker, Kubernetes , RedHat OpenShift).
- Skilled in design and implementation of RESTful APIs with understanding of SOLID principles.
- Excellent knowledge of ORM technologies (e.g. JPA, Hibernate).
- Proficiency in relational databases (e.g., MySQL, PostgreSQL) and NoSQL databases (e.g., MongoDB).
- Experience with cloud platforms (e.g., AWS, Google Cloud).
- Experience working with agile methodologies (e.g. Scrum) and the iterative cycles.

PROJECTS

E-Commerce app [Micro-services | Spring Boot | Spring Cloud]

- Five micro-services (customer, product, order, payment, notification) using PostgreSQL and MongoDB Databases and secure the application with Keycloak.
- Using discovery server (Eureka) for service registry.
- Asynchronous communication with Kafka.
- Synchronous communication with Open Feign and Rest Template.

Banking app [Micro-services | Spring Boot | Spring Cloud]

- Four micro-services (accounts, cards, loans, messages) using MySQL Database and secure the application with Keycloak.
- Building resilient microservices using RESILIENCE4J framework.
- Implementing observability and monitoring using Prometheus, Loki, Tempo and Grafana.
- All microservices are deployed into Google Cloud Kubernetes cluster as a container orchestration tool.

Customer Management app [Micro-services | Spring Boot | Spring Cloud]

- Three micro-services (customer, fraud, notification) using PostgreSQL Database.
- Using RabbitMQ as a message broker for Asynchronous communication.
- All microservices are deployed into local Kubernetes cluster as a container orchestration tool.

Full-Stack Food Ordering app [Spring Boot, React, AWS]

- Create and consume RESTful APIs with Spring Boot and integrate them with React.
- Implement JWT-based authentication and role-based authorization with Spring Security.
- Deploy both backend & frontend services to AWS cloud server for live production (EC2 – RDS)

Full-Stack Airline Booking app [Spring Boot, React]

- Create and consume RESTful APIs with Spring Boot and integrate them with React.
- Using MySQL database, Spring Data JPA, and Entity relationships (OneToOne, ManyToMany).
